Jonathan Robert

Programmer Analyst, Transportation

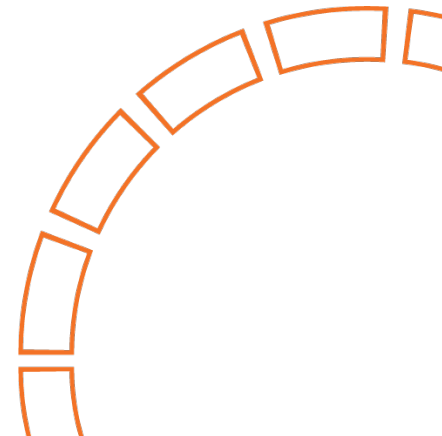

Albertsons

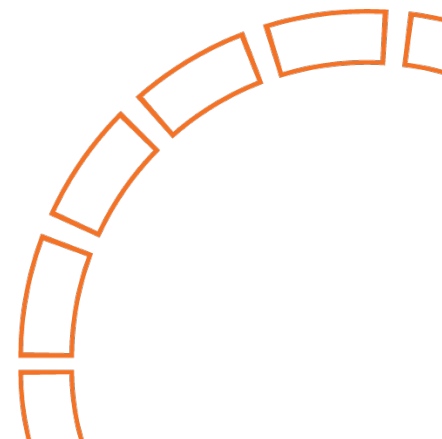

# Planning for Powerfleet Trailer Telematics

- Trailer Hardware Selection
- Mobile Data Plan
- Install Cost Projections
  - Albertsons network, timeline, resources, & equipment count.
  - Installation budget based on counts & labor.
  - Installation timeline by location
  - Web portal training & final back office set up @ 90% complete.
- Data Integration
  - Virtual Machine versus Kubernetes for Powerfleet's External Access Interface [EAI]
  - Integration Planning  
ie: enterprise messaging and data warehouse

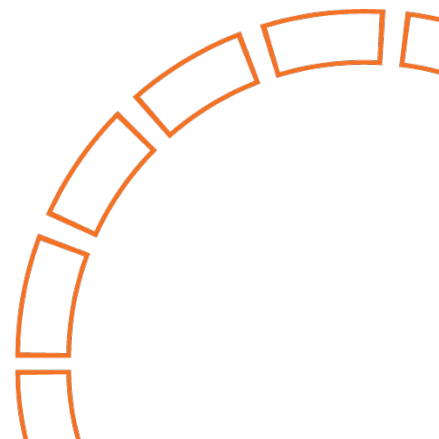

# Deployment of Powerfleet Trailer Telematics

- Trailer Hardware Installation
  - Track progress by DC – equipment count, % installed & weekly progress.
  - Track and Report installation labor efficiency and budget.
  - Track Procedure Adjustments and Lessons Learned
    - Holidays & equipment availability
    - Labor inefficiencies
    - Return Air TMD location
    - Landmarks
- Powerfleet New Features
  - Virtual Set Point
  - Temperature Warning Email Escalation
- Custom Extensions leveraging Powerfleet External App Integration
  - Store visibility to incoming trailer locations
  - Set point based on Commodity and Landmark History
  - Store Pending Arrival Notification
  - Post Journey Operational Review

# Maintenance of Powerfleet Trailer Telematics

- Trailer Hardware Maintenance
  - Maintenance Plan
    - Measure and address non-communicating Gateways and Return Air TMD
    - Plan for LCR trailers
  - Development of Maintenance related SOPs (reports)
- Software Maintenance
  - User Account Data in Power Fleet
    - SSO would be ideal
  - Hosting Powerfleet EAI [External Access Interface]
    - Identifying Critical Vulnerabilities (CVEs)
    - Installing updates from Powerfleet
