

LV-760 Multi-Sensor

Smart. Rugged. Low maintenance.

Do you need complete visibility of what is happening across your business at any given moment? Or perhaps you're struggling with the challenge of effectively monitoring and managing your supply chain? The Powerfleet LV-760 can greatly enhance your supply chain visibility, improve management oversight, and accelerate cost reduction.

The LV-760 is a monitoring device as part of a sensor network that features an extended range, and a rugged IP69K

enclosure for outdoor durability, and long operating life in harsh conditions. It utilizes BLE technology to communicate with Powerfleet's portfolio of asset management solutions, or any other hub that supports BLE communication (smartphones, tablets, and OEM hubs). The device not only tracks assets, but also monitors the environment and conditions in which the asset is currently located or handled via temperature, accelerometer, and magnetic (doors closing/opening) internal sensors.

FEATURES

<p>RUGGED ENCLOSURE FOR HIGH-IMPACT AREAS</p> 	
<p>STORE AROUND 3,000 DATA SAMPLES</p> 	

- Real-time environment-sensing capabilities including temperature monitoring, movement/impact, orientation, and door (open/closed) status.
- Compliance with IP69K Compliant (protected against close-range high pressure, high temperature spray downs)
- Approximately 7 years of operational time
- Supports two operating zones with different configurations for each zone
- Set it and forget it—low maintenance and no battery replacement required
- Easy to install

PROBLEMS SOLVED

FREIGHT VISIBILITY

Location, environmental, thus enhancing efficiencies

REDUCE LOAD/LOSS DAMAGE

Alerting on temperature out of range, unscheduled door openings, and route variation

IMPROVE CUSTOMER SATISFACTION

Ensuring the required shipment conditions and quality control of product

STAY IN COMPLIANCE

Proof of temperature information you need to manage FSMA compliance
